DISCOVER MORE ABOUT

# BILL WALSH LAB TRANSNATIONAL CANCER RESEARCH LABORATORY

The Bill Walsh Translational Cancer Research Laboratory was opened in 1980 as a result of the hard work and fundraising efforts of Bill Walsh.

In 1975 Bill Walsh was diagnosed with terminal cancer and was one of the first patients to be treated with chemotherapy at the Royal North Shore Hospital (RNSH). During his treatment, Bill realised resources and funding for cancer research were limited and so took it upon himself to make a difference. Through the creation of the Bill Walsh Art Union, Bill raised almost \$500,000 to establish the Bill Walsh Cancer Research Fund.

The Bill Walsh Laboratory is the research arm of the Medical Oncology Department at RNSH.

To achieve these aims clinicians, oncologists, surgeons and cancer researchers work together taking questions from the bedside to the bench to fast-track discoveries into clinical practice.

## HIGHLIGHTS:

The main aims of our research are:

- Improving treatment for cancer patients.
- Overcoming resistance to current cancer therapies.
- The identification and validation of bio-markers to improve diagnosis, prognosis and the tailoring of therapies to individual patients.

**By making a gift to the Bill Walsh Lab you are building upon a legacy and ensuring our groundbreaking cancer research is able to continue improving patient outcomes.**
